From School Library Journal

Grade 6-12-- Eight American scientists are featured in these brief profiles. The writing is competent, with an emphasis on factual material over personal anecdotes. Yount includes a chronology of each person's life and informative, annotated bibliographies. Overall, this is a useful source for reports. The introduction should be noted, for the author mentions how racism both created obstacles for African-Americans and helped mythologize some figures' achievements (she cites Benjamin Banneker as an example). She also mentions the opposing viewpoints of Booker T. Washington and W. E. B. DuBois on the best approach to educating blacks and improving their societal lot in life. Readers may disagree with the views presented, but the political and historical context that helped to mold these scientists and their public images is significant. -- Cathryn A. AN EYE OPENER

By Bonita L. Davis

There have been a few books written about Black scientists that are as interesting as the one before you. Black Scientists profiles eight African-Americans who made significant contributions to the field of applied and pure science. Some of the individuals profiled are well known while others have faded into the backdrops of history. These African Americans who took on the field of science had to overcome many obstacles in obtaining their education, finding positions and acquiring funds for their research. All of them met the mark of excellence and we have become the beneficiaries of their work.

Unlike other biographies of Black scientists, the author dispenses with the well worn myths surrounding these figures. She focuses on what the individual actually contributed to their field other than being the "first" Black. You are in for a surprise when you find out the impact that one man had on the field of medical education for Black doctors and nurses. You will be astounded at the work done in chemotherapy, chemistry and computer science by highly assertive African-American men and women.

Learning about these great people is an eye opener. Science is a field wide open in which anyone can participate regardless of race. Their inspiring achievements and contributions tell us that African-Americans can and will continue to make strides in the area of science. Read these stories and consider walking in their footsteps.
