About the Author

Sylvia S. Mader has authored several nationally recognized biology texts published by McGraw Hill. Educated at Bryn Mawr College, Harvard University, Tufts University, and Nova Southeastern University, she holds degrees in both Biology and Education. Over the years she has taught at University of Massachusetts, Lowell; Massachusetts Bay Community College; Suffolk University; and Nathan Mayhew Seminars. Her ability to reach out to science-shy students led to the writing of her first text, *Inquiry into Life*, that is now in its thirteenth edition. Highly acclaimed for her crisp and entertaining writing style, her books have become models for others who write in the field of biology. Although her writing schedule is always quite demanding, Dr. Mader enjoys taking time to visit and explore the various ecosystems of the biosphere. Her several trips to the Florida Everglades and Caribbean coral reefs resulted in talks she has given to various groups around the country. She has visited the tundra in Alaska, the taiga in the Canadian Rockies, the Sonoran Desert in Arizona, and tropical rain forests in South America and Australia. A photo safari to the Serengeti in Kenya resulted in a number of photographs for her texts. She was thrilled to think of walking in Darwin's steps when she journeyed to the Galápagos Islands with a group of biology educators. Dr. Mader was also a member of a group of biology educators who traveled to China to meet with their Chinese counterparts and exchange ideas about the teaching of modern-day biology.

Overly priced for few changes

By Andrew S. Berg

It should come as no surprise that there are few changes for this edition vs. the older one. My lab partner has the older edition, so at the start of each lab we go page by page to compare the changes. If your teacher allows it, you'd be better off saving money and buying the next oldest edition of this book and just

photocopying the missing pages if they have to be turned in.

Price aside, the shipping was quick and it was needed for my biology class. It's not meant as a substitute for an actual textbook, but it does give a pretty decent overview of the concepts discussed that the labs take place on.

Lab Manual

By Shannon

This book was required for a course I am taking. It's alright... nothing terribly exciting but does break down basic biology concepts pretty well. If you already know basic high school/college biology and chemistry it's just going to be a review for you.

I gave it 5 stars because I was very pleased with the overall quality and fast arrival. I ordered it standard and it got here in perfect condition about 4 days before a friends book that she had ordered before me from a different seller.

Product displayed was not the product received! For the ...

By Marie Peltola

Product displayed was not the product received! For the money I spent on the lab manual it should have at least had the same cover page as shown and should have been spiral bound versus three hole punched and kept together with cloth ribbon tied in a not! My only hope is that when I start the class the contents match what is required for the class labs. Photo of what was actually received supplied.
