Review

"An indispensable guide for those who are going to build . . . by the leading log building instructor in North America." -- Log Home Living Magazine

"An indispensable guide for those who are going to build . . . by perhaps the leading log building instructor in North America." -- Log Home Living Magazine

"Fantastic ! Chambers casts light into some of the darkest corners of log building. Buy it. Read it." Bill Olsen -- Log Building News

"Fantastic! In one book Chambers casts light into some of the darkest corners of log building. Buy it. Read it." -- Log Building News

From the Publisher

The Log Construction Manual has been the best-selling log-home how-to book since it was first published in 2002. This 2006 edition has a section of color photos, and updated black and white photos throughout. Hundreds of photos and drawings compliment the clear and easy-to-read information that Chambers provides to beginners and experienced log builders.

From the Author

I have written the Log Construction Manual as a textbook for learning the trade of handcrafted, scribe-fit, log construction. It is used by log building trade schools throughout the world, but is written for people who want to build or help-build their own log home. My book clearly explains what you need to do to build the walls and roof of scribe-fit log homes.

The State-of-the-Art

By Empire Builder

I just finished reading this book, and I have to say that it is head-and-shoulders above every other log home construction book I've read. The illustrations are superb, and the tone of the text is very objective and factual. In contrast to books with the "this is how I've been building log homes for XXX years" attitude, Chambers' approach is "I didn't invent it, but so far this is the best way I've found to do this particular task. If I find somebody else doing it a better way in the future I'll start doing it that way." Chambers not only isn't afraid of not-invented-here ideas, he positively embraces them! There is even a chapter on the structural engineering of log trusses, written by a structural engineer (fancy that).

Chambers also covers the subject comprehensively, from the highest-level ideas (his chapter on settling is fascinating) to the lower-level details (proper chainsaw stance for cutting the lateral groove, for instance).

Let me contrast this a bit with Mackie's "Owner-Built Log Home". Mackie's book is a good read, because he's a terrific wordsmith and he really conveys the pleasure of building your own log home. But his illustrations aren't nearly as clear as Chambers', and he tends to write for an audience that already understands a lot of wood joinery terminology and procedures. "Then we did this, and this, and this," and I'm like, "whoa, did you skip a few steps there?" I often found myself re-reading a page several times because I just couldn't envision what he was doing in my mind's eye. Chambers never leaves you wondering.

I think both books have a place on your bookshelf, but if you really want to learn the most hands-on information in a single book, this is the one.

In need of update

By Douglas Sky

This is an excellent "Manual". Most all the info you need if you want to build a hand scribed round log cabin, but no color pictures. If your looking for technical building info this is your book. I bought almost every book available on log homes building and I wouldn't be with out this if you plan to build one yourself. Not much on house plans or pic's though.
