About the Author

Steven Sedlmayr, from a very young age, has always been a very curious person. Pursuing his natural instincts to find answers, Steven is a nationally recognized scientist having been one of the youngest recipients to receive a National Science Foundation grant. He worked with NASA to place the Viking Landers on Mars, and pioneered flat screen television technology. He was the first one to make a display with over 1 million pixels, and predicted the current state of flat screens a decade before they were available. If you see a large screen, a menu screen in a restaurant, a high definition theatre projection, or a screen at an amusement park, you are probably looking at part of his technology, if not his foresight. Over the past 14 years, Steven has turned his research efforts to water; he is now one of the foremost experts on water science and holds a US patent on cutting-edge water purification technology. Steven is a husband and father concerned with the health of his family and the water they drink. He has turned his curiosity and scientific study to the field of water and the effect that it has on human health and biology. As an author, this book is the result of many years of medical research culminating into a comprehensive look into how our bodies react to the different waters that we consume, and how these waters contribute to the health or detriment of our bodies.

If your health and the health of your loved ones is important

By Brad Moss

If you want to be healthy, by that I mean healthy beyond Allopathic medicine, this book is a must. Mr Sedlmayr explains not only the important role of water, but what the body must do to convert today's municipal water into something usable. Effects of fluoridation, chlorination and

many other chemicals and drugs(yes prescription drugs are in all water now) are brought to light in his book. Different ph values the body needs and what is known as EZ Water. Health truly does start with the basics...Water being the most basic. If your health and the health of your loved ones is important, *The Digestive Process and The Role Of Water In Digestive Health* is a must.

Great and Important!

By Anthony R. Elia

A truly great book! This book is a thorough examination of the role water plays in our survival and well-being and, more importantly, why different types of water can have more benefit to us than others. Steven Sedlmayr's long history as a successful inventor and researcher has provided him the perfect background to write a book that challenges the reader to see water from a new perspective. A perspective which is increasingly being embraced by those on the cutting edge of academia and water research. Sedlmayr provides a highly detailed and well supported account of his theories in a manner that is accessible to all. I highly recommend this book!!!
